TRAFFIC COUNTS 2016 – 2025

Serving: Berkeley, Charleston, Dorchester Counties

2016-2025 Traffic Counts Berkeley, Charleston, and Dorchester Counties

The following tables show a ten-year history of traffic counts in our region. They are organized by station numbers for each county. An index by station number follows.

Who provides these traffic counts?

You may have seen the road tubes or in-pavement installations of traffic counters while driving around the area. These traffic counts are collected by the South Carolina Department of Transportation (SCDOT). SCDOT provides an interactive count map at: <https://scdottrafficdata.drakewell.com/publicmultinodemap.asp>

Where along the road are traffic counts measured?

The station numbers in the table correspond to locations where traffic counts are taken each year. The traffic count locations do not move over time in order to ensure consistency in measurement. The location in the table shows the two cross streets or other boundaries between which the count is located. The 2025 traffic count map is available on the [BCDCOG GIS Data Portal](#) on the Transportation Planning page at [bcdcog.com](#)

What do the count numbers mean?

The traffic counts are annualized average daily traffic (AADT) counts; each count represents the average amount of vehicular traffic, in both directions, which passes a given point over 24 hours on a typical day in the year. SCDOT counts are seasonally adjusted so that they represent an average of all seasonal traffic.

How accurate are these traffic counts?

AADT is a key variable in producing vehicle miles traveled (VMT) estimates, for analyses of crash rates, evaluation of infrastructure management needs, air quality compliance, and validation of travel demand model predictions. This data is frequently used to influence policy decisions. Despite their importance, AADT values are simply rough estimates of traffic counts along major roadway sections. SCDOT calculates these counts using short-period traffic counts (SPTCs) in which one- to three-day samples are taken every few years at select points across the statewide highway network. These counts are factored up to a yearly estimate based on year-to-year trends, sampling season, and day-of-week factors developed using should be considered estimated figures rather than actual figures.

What about the counts in the chart that are N/A?

For various reasons, some counts have been phased out over the past 10 years. Also, new stations are introduced to the program as new roads are constructed or as existing roads become more heavily traveled. The fields marked N/A represent stations where no counts were available. Where a station number appears more than once, the rows correspond to different road segments and are listed in the same order as the station index.

When did Traffic begin being monitored?

The annual count program at SCDOT dates back to 1987, and the data is available upon request from BCDCOG. Limited counts were measured prior to 1987 at certain locations. For information on historic counts, contact the South Carolina Department of Archives and History at (803) 896-6196.

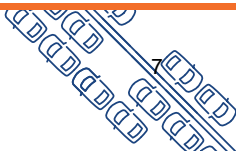

Where can I find accident data?

Accident data, usually reported by intersection, is collected separately by the South Carolina Department of Public Safety's Office of Highway Safety and Justice Programs.

Safer Crosswalks. Safer Communities. Improving Pedestrian Safety Across South Carolina

Project: 700 Crosswalks is a pedestrian safety initiative led by the **South Carolina Department of Transportation (SCDOT) District Six** to improve crossings at signalized intersections throughout Beaufort, Berkeley, Charleston, Colleton, Dorchester, and Jasper counties.

The initiative was established with a goal of improving approximately **700 crosswalks** through new installations and upgrades that **enhance accessibility and safety** for people walking. Improvements include the installation of new pedestrian signals and pushbuttons, upgraded ADA-compliant curb ramps and other safety enhancements.

The project tracking displayed here reflects crosswalk **improvements completed between 2019 and 2026 throughout the six-county region**. The data includes projects completed by **SCDOT** as well as improvements delivered in coordination with **local governments and partner agencies**, providing a comprehensive picture of pedestrian safety investments across the region.

Together, these improvements help create safer, more **accessible crossings** and strengthen connections between neighborhoods, schools, parks, businesses, and other community destinations.

By the Numbers

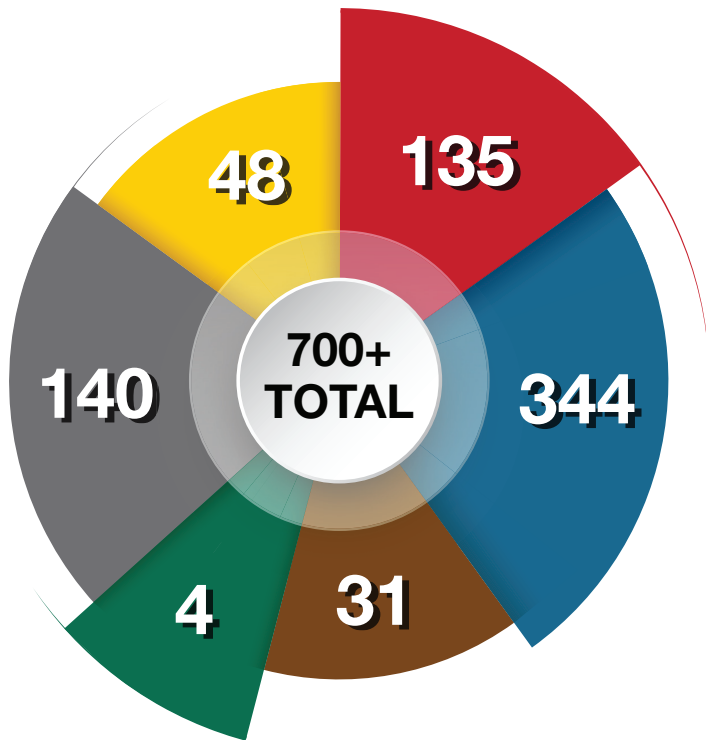

- 700+ crosswalk improvements completed
- Projects completed in six Lowcountry counties
- Continued investments made each year from 2019–2026

What Makes a Crosswalk Safer?

Depending on the location, improvements may include:
