Appendix A-1

PUBLIC ENGAGEMENT

Draft

Public participation is an important component of the transportation planning process. Public engagement opportunities are planned and conducted in a manner that is appropriate for intended goals of public involvement so any feedback collected informs the process and shapes final decisions. Following are the various levels of engagement that are typically undertaken:

INFORM – Provide clear information on the planning process to help members of the public understand issues, options, and solutions

CONSULT – Consider public’s understanding and opinion of alternatives, decisions, and actions

INVOLVE – Engage public to ensure their issues and concerns are considered throughout the decision making process

COLLABORATE – Partner with public in the development and recommendation of preferred alternatives

The following sections summarize public engagement activities in the development of the 2040 RL RTP.

Rural Transportation Study Committee

The BCDCOG Rural Transportation Study Committee comprised of SCDOT, county and municipal government staff, and elected officials. Its members served in an advisory capacity to the BCDCOG Planning Services staff at key stages in the development of the Plan and were responsible for:

- Providing direction, advice, and feedback;
- Resolving challenges and barriers;
- Guiding the development of vision, goals and objectives, and evaluation and prioritization process; and
- Acting as ambassadors for local governments and constituents to support and encourage participation.

During the course of this project, three meetings were held at key milestones: project kickoff, development of preliminary plan, and development of final draft plan (Note: Due to the COVID-19 pandemic, feedback to the draft plan was invited virtually). Committee members who participated in these meetings included:

Berkeley County Council, Caldwell Pinckney Jr. (Chair)

SCDOT District 6, Josh Johnson

Berkeley County, Danny Thrower

Charleston County, Herbert Nimz

Charleston County Council, Anna Johnson

Dorchester County Transportation Agency, Mike Murphree

Town of McClellanville, Robert Gannon

Jurisdictions

BCDCOG met with SCDOT and planning/engineering staff from each of the three counties early in the plan development process to determine the status of active transportation projects, both planned and under development, and gain insight into the major transportation issues or concerns that the rural planning area is facing. The consultation allowed BCDCOG staff to vet projects proposed as part of the 2035 Rural Long Range Transportation Plan and identify new projects for inclusion in the development of the current plan. One-on-one stakeholder meetings were held with staff of local municipalities to understand issues and challenges experienced by them and discuss opportunities for potential transportation improvements that address their local needs. Staff met with the following representatives:

Berkeley County	Les Blankenship, Deputy County Supervisor Frank Carson, County Engineer Lisa Costner, County Engineer
Charleston County	Steven Thigpen, Director Public Works Eric Adams, Deputy Director Public Works
Dorchester County	Jason Carraher, Director Public Works
Town of Awendaw	Bill Wallace, Town Administrator Jody Muldrow, Planning Administrator
Town of Harleyville	Charles Ackerman, Mayor Amanda Childers, Town Clerk
Town of Hollywood	John Dunmyer III, Mayor Roy DeHaven, Planning Director
Town of Jamestown	Roy Pipkin, Mayor Douglas Gerry, Town Councilman
Town of McClellanville	Rutledge Leland III, Mayor Michelle McLellan, Town Administrator

Town of Reevesville Paul Wimbley, Mayor
Charles Mooren, Councilman

Town of St. George Anne Johnston, Mayor

Town of Ridgeville Clarence Hughes, Mayor
LeAnne Barwick, Town Clerk

Public Meetings

One round of public meetings was organized early in the plan development process to inform rural residents of the Plan update effort, provide an overview of existing conditions of the rural transportation system, and hear first-hand issues experienced by residents. The meeting was held in October 2019 at four locations spread across the tri-county area and attended by a total of 31 individuals. The public meeting locations are displayed in [Map A](#).

Project Webpage

A project webpage was developed and hosted on the BCDCOG website as a resource to provide information on the Plan purpose, development process, open-house public meetings, and survey.

Public Survey

As a part of the public involvement process, a survey questionnaire (see [Image A](#)) was developed and administered to the general public early in the plan development process via two methods: hard copy distribution and online posting. Hard copies were distributed through respective offices of jurisdictions and at the public meetings. The online survey was launched in conjunction with the public meetings and remained active for approximately one month (September 26, 2019 – October 31, 2019). A graphic summary of the survey results is shown in [Figure A](#) and public comments/feedback are compiled in [Table A](#) and [Table B](#).

SURVEY

for

Berkeley-Charleston-Dorchester

Rural Long Range Transportation Plan

We'd like to hear from you!

The Berkeley-Charleston-Dorchester Council of Governments (BCDCOG) in partnership with the South Carolina Department of Transportation (SCDOT), is in the process of updating the BCDCOG Rural Long Range Transportation Plan (2040 LRTP). The 20-year multimodal plan will serve to identify and address long-term transportation issues and needs that impact the rural communities in the tri-county region.

Public participation is critical to the plan's success so your input is important and matters! Please take approximately 5-10 minutes to complete the following questions. **Survey can be completed online at: https://budog.com/2040RLRTP_SURVEY** or webpage.

1. Where do you live?

<input type="checkbox"/> Town of Avason	<input type="checkbox"/> Town of Bassettville
<input type="checkbox"/> Town of Borneau	<input type="checkbox"/> Town of Ridgeville
<input type="checkbox"/> Town of Hartselle	<input type="checkbox"/> Town of St. George
<input type="checkbox"/> Town of Hollywood	<input type="checkbox"/> Town of St. Stephen
<input type="checkbox"/> Town of Jocassee	<input type="checkbox"/> Unincorporated Berkeley County
<input type="checkbox"/> Town of McClellanville	<input type="checkbox"/> Unincorporated Charleston County
<input type="checkbox"/> Town of Maddyville	<input type="checkbox"/> Unincorporated Dorchester County
<input type="checkbox"/> Town of Roseau	

2. What is your home zip code? _____

3. What is your primary work zip code? _____ Check if not applicable

4. What is your age? (Optional)

<input type="checkbox"/> Under 18 years	<input type="checkbox"/> 40-49
<input type="checkbox"/> 18-24	<input type="checkbox"/> 50-59
<input type="checkbox"/> 25-29	<input type="checkbox"/> 60-69
<input type="checkbox"/> 30-34	<input type="checkbox"/> 70-79
<input type="checkbox"/> 35-39	<input type="checkbox"/> 80 and over

5. What is your gender?

Female

Male

Choose not to answer

6. What is your race or ethnicity? (Optional)

<input type="checkbox"/> White/Caucasian	<input type="checkbox"/> Asian
<input type="checkbox"/> Black or African American	<input type="checkbox"/> Hispanic, Latino or Spanish origin
<input type="checkbox"/> American Indian or Alaska Native	<input type="checkbox"/> Native Hawaiian or Pacific Islander

Other (please specify) _____

Page 1 of 4

7. How many people currently live in your household?

<input type="checkbox"/> 0	<input type="checkbox"/> 4
<input type="checkbox"/> 1	<input type="checkbox"/> 5
<input type="checkbox"/> 2	<input type="checkbox"/> 6+
<input type="checkbox"/> 3	

8. Do you or members of your household have access to a private car/truck or other vehicle (motorcycle, moped, etc.)?

0 vehicles available

1 vehicle available

2 vehicles available

3 or more vehicles available

9. What means of transportation do you use to get around in the rural areas of the Berkeley-Charleston-Dorchester region and how frequently do you use the means identified? (Select all that apply)

Means of transport	Never	Very Infrequently (1-2 times per year or less)	Infrequently (multiple times per year)	Frequently (multiple times per week)	Very Frequently (multiple times per month)
Other vehicle	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Vanpool	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Carpool	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Bus	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Taxi	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Rideshare (e.g., Uber, Lyft, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Motorcycle	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Moped	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Scout	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Walk	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Other (please specify) _____

10. What percentage of your household income is spent on transportation expenses (gas, car payments, car insurance, registration, public transit, rideshare costs, etc.)?

0% - 10%

11% - 20%

21% - 30%

31% - 40%

More than 40%

11. In the last 6 months, have you or any household members missed any of the following due to lack of transportation? (Select all that apply)

<input type="checkbox"/> Work	<input type="checkbox"/> Visiting friends/family
<input type="checkbox"/> Religious activities	<input type="checkbox"/> Medical appointments
<input type="checkbox"/> Kids' activities	<input type="checkbox"/> Social/recreation trip
<input type="checkbox"/> School/job training	<input type="checkbox"/> Social/service agency appointment
<input type="checkbox"/> Shopping (retail)	<input type="checkbox"/> No activities missed
<input type="checkbox"/> Shopping (grocery)	

Other (please specify) _____

Page 2 of 4

Image A - Public Survey Questionnaire (Continued)

12. What are the major transportation issues that you face in the rural areas of the Berkeley-Charleston-Dorchester region? (Select all that apply)

- Traffic congestion
- Poor road conditions
- Poor road connectivity
- Weight requirements or conflicts (truck or rail)
- Safety of roadways and intersections
- Lack of transit service
- Difficulty accessing existing transit service
- Inadequate pedestrian and bicycle facilities (sidewalks, crosswalks, bike lanes, multi-use paths, etc.)
- Lack of alternative transportation options such as vanpools, carpools and ride-sharing services.

13. What do you think are the most effective ways to improve transportation in the rural areas of the Berkeley-Charleston-Dorchester region? (Select all that apply)

Action	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
Widen existing roads/highways	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Build new roads/highways	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Improve existing infrastructure (government conditions, bridges, drainage, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Improve the operation of existing roads (traffic control, signal coordination, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Add turn lanes at intersections	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Improve road and intersection safety	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Provide more bicycle and walking facilities	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Improve the operation of existing transit service	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Expand public transit service (new and options in rural areas, bus, bus rapid transit, ferry, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Improve carpooling, car-sharing, and ride-sharing options	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Increase the use of technology to reduce traffic congestion and delay (provide information - electronic message signs, highway cameras, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Coordinate transportation and land use decisions	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Increase transportation funding	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

14. If additional funding is needed to improve transportation in the region, which of the following potential funding sources would you support? (Select all that apply)

- Toll
- Increase in gas tax
- Increase in transportation sales tax
- Increase in vehicle registration fees
- Government-backed low interest loans and bonds
- Public-Private Partnerships (a government service or private business venture funded and operated through a partnership of government and one or more private sector companies)

Other (please specify) _____

15. Our transportation improvement and investment decisions should....

Please rank the importance of the following criteria the BCDCOG could consider when prioritizing transportation investments and improvements in the rural areas of the Berkeley-Charleston-Dorchester region over the next 50 years. Rank the most important as 1, the second most important as 2, and so on.

CRITERIA	RANK (1-10)
Address congestion by building new roads/highways	
Address congestion by widening existing roads/highways	
Improve existing infrastructure (government conditions, bridges, drainage, etc.)	
Improve public transportation	
Improve freight mobility	
Address impacts to and preserve the environment (wetlands, parks, wildlife, etc.)	
Improve and/or extend bicycle and pedestrian facilities (crosswalks, access, etc.)	
Address safety local water users	
Support transit use (bus, park, trol, carpool, etc.)	
Support economic development	
Support innovation/trials	
Address safety	

16. Is there any specific road/intersection location(s) that you feel could be improved upon?

Please identify the location, the issue (safety, traffic congestion, truck traffic, infrastructure condition, etc.) and the type of improvements you feel could resolve the issue (traffic lights, turn lanes, roundabouts, additional lanes, crosswalks, sidewalks, bike lanes, resurfacing, etc.)

If completing paper form, return it to: transport@bcdcog.com or please mail by Tuesday, October 31st to:

Ranked evaluation and prioritization criteria

Table A – Comments from Survey Respondents (to Rural Areas)

ID	Issues in Rural Areas
1	Turning arrow lights at 165 & 17. Turning arrow lights at 165 & 162 Highway. 162 repaved/ possibly widened a little.
2	The intersection of Hwy 41 and French Santee Rd/17A in Jamestown. We have had a number of accidents at this location. Every day a few vehicles traveling south on Hwy 41 wanting to turn right onto 17A (Heading to Moncks Corner) or left onto French Santee Road (Heading to McClellanville) sometimes come to a complete stop at the intersection even though they have the right of way with a yellow flashing light. Vehicles approaching the intersection's red flashing light need some kind of advanced warning to alert them to the fact that they will have to stop. I have witnessed a few near accident situations caused by drivers who fail to come to a complete stop at the flashing red light. The markings at the intersection are worn/faded. This is a high traffic intersection with a large number of 18 wheelers traveling on Hwy 41 and 17A along with dump trucks carrying gravel from the Martin-Marietta quarry located on French Santee Road.
3	The ditches on Seewee Rd are overgrown. During heavy rain and hurricanes, the ditches do not flow out so the homeowners yards are flooded. It's a mess.
4	Safety concerns in Ravenel on Highway 17 and 165. Many accidents and deaths due to pedestrian crossings, speeding, truck traffic and middle lane mergers.
5	Ridge Rd from the city down to Givahans Park Rd needs to be re-surfaced after years of dump truck travel from the sand pits off Wire Rd. Traffic Light at the intersection of Ridgeville Rd and Hwy 78. Getting out on to 78 is getting harder to do. Light at the intersection of 27 and I26
6	I'm not sure how we could fix this; however, when there is an accident at the Tail Race Bridge, traffic gets backed up all the way down HWY 52. It could take hours before you can get across to get home. The only other option to get around the bridge is to take HWY 6 which is in the other direction. I am from Pineville but I live the Forty-One Community of St. Stephen. I noticed that a lot of the residents like to walk the streets for exercise or to visit neighbors. The problem is that there are not any sidewalks and most use the road instead of the grass especially at night/early morning. When residents walk down HWY 52 into St. Stephen they are using the median for walking and bikes and that also should be a safety concern. I do love how the roads in my neighborhood are always repaired in a timely manner.
7	Hwy. 52 at Hwy. 402. Traffic congestion every day in the afternoon due to vehicles trying to enter 52 from 402. Also, issues when there is an accident at the location. There is no way to exit Moncks Corner when the lanes are shut down. It is not going to get better with time. To see how to fix it, look at Hwy 17 and Hwy 41 in Mount Pleasant. It was the same issue 10 years ago.
8	Hwy 165/U.S.17 in Ravenel needs directional turn arrows immediately
9	Hwy 162 needs to be completely redone. It's crumbling in lots of spot and all they ever seem to do is hot parch it. When they have repaired parts of it in the past they leave so much debris on the side of the road they cause water to pool on the road and ditches to be clogged. This causes flooding which causes the roads to breakdown again.
10	Yes, the wire road between Ridgeville & Grover has been resurfaced piecemeal and between Grover & the Orangeburg County line needs to be resurfaced in a bad way!
11	Highway 162 needs to be improved, widened and more turn lanes added. More bike lanes added everywhere. Sidewalk and bike lane along Toogoodoo Road from at least Wilson Road to 162 intersection.

Table B – Comments from Survey Respondents (to Urban Areas)

#	Issues in CHATS Urban Areas
1	Yeaman's Hall near Remount - in the morning and in the afternoon, especially when there is a train, the traffic is ridiculous and it is difficult to get out of the neighborhood. I know it's not Berkeley County, but Remount in that area, especially in the mornings, is AWFUL.
2	Yeaman's Hall at Murray Dr. Turning left from Yeamans Hall Rd to Murray Dr without turn signal is dangerous during school hours.
3	We are far past the implementation of rail transit to outlying cities along I-26 and then feed off the major corridors. Far too many cars on the roads that were built to transport less. Building of neighborhoods has been going on for decades and roads have been an afterthought.
4	Turn lights at Savage and Paul Cantrell. Turn lights at Wappoo and 17.
5	Turn lanes at Montague Plantation and Highway 52; widening 176 in Goose Creek; widening 52 and N. Rhett from Goose Creek to I-526 (traffic is terrible in rush hour!!); signal improvements all along North Rhett and Henry Brown, resurfacing and shoulder improvements to eliminate rough surfaces and potholes everywhere. Cane Bay and other developments should be charging an impact fee to pay for the roads!
6	The train that stops on north Rhett
7	The parts of Hanahan/ Otranto that border Rivers Ave.
8	The last part of Dorchester Road to be upgraded (Orangeburg Rd to 17A) has fallen apart within two years of its completion. Why hasn't the contractor been held accountable and required to fix the roadway?
9	The intersection at Rivers, Otranto Rd and North Park Blvd in North Charleston. Our family has had 2 accidents there because of congestion along with how backed up it gets during rush hour because people try to cut thru there from NAD Rd to get back on Rivers. Also the exit ramp at hey 26 west and Jedburg Rd needs more than one lane and to be long because people are lined up on the shoulder exiting and then people are cutting in and causing accidents. The intersection of cane bay Blvd. and N. Creek dr. gets so backed up during rush hours there needs to be another entrance into cane bay
10	Rose and Brighton Park Blvd needs a light badly before someone gets killed. Rose Drive needs sidewalks so walkers or bikers don't get killed walking from Carriage Lane or Tramway to access 17-A to go to work. This road is overdue, i've been here 20 yrs and it's unsafe wish you would quit catering to Nexton.
11	River Road on Johns Island between Main Road and Maybank Highway is terribly unsafe. The deep ditches, large trees, and constant heavy traffic volume combine to create one of the most unsafe stretches of road in the county. Two fatal traffic accidents have occurred on this stretch in the last few weeks. I feel the ditches could easily be culverted, allowing the roadway to be widened and also possibly bike lanes or sidewalks. Brownswood Road on Johns Island suffers from the same issues as River Road. This road is now basically suburban and should feature bike lanes, sidewalks, crosswalks, and turning lanes in keeping with its new use.
12	Remount Rd. Intersection of remount and rivers. Both I-526 interchanges and Remount Rd. Exit I-26 from Ashley Frustrate- downtown and vice versa.
13	Railroad tracks. 526 is coming apart with potholes and complete the project.
14	Railroad Ave. Extension as promised over 10 years ago. Hanahan and its children need this now not later!!!
15	Maple street & hwy 78, turning lanes Maple street & Richardson, turning lane W butternut, old Orangeburg & mallard, roundabout

Table B – Comments from Survey Respondents (to Urban Areas) (Continued)

#	Issues in CHATS Urban Areas
16	Mt. Holly and highway 52, needs turn lanes. Berkeley county needs to require more sidewalk connectivity. Most importantly, impact fees should be implemented to provide infrastructure improvements, including parks!
17	Manholes and pavement should be installed or repaired in such a manner that they should be level with each other.
18	Limit all left turns on University Blvd between NAD and I-26 to intersections with stop lights only. Install a center median to stop left turns except for controlled intersections or add specific lanes for U turns. Put up a barrier on North Rhett after Remount just before I-526 to stop assholes from running the left lane until the last minute, they know what lane gets onto I-526 and can get in it with the rest of us at the appropriate time.
19	I 26 2 hours to go from College Park to Charleston is completely stupid and has happened numerous times in the last 30 days alone. I 25 years there has been little highway capacity added while the population has exploded and I am totally sick of it. Myrtle Beach has been building a lot of roads why can't we?
20	I 26 & 526 take truck port traffic off and put on rail to less congested areas
21	I-526/I-26 interchange
22	I-526 needs to be expanded sooner than later. Merge of I-526 and I-26 needs to be fixed sooner than current plans.
23	I-26 and 526 merging going west bound. First off with minor sign changes to make those coming from I-26 to change lanes later... you could reduce those merging from stopping and thinking that they have to get over or will end up exiting.. when actually they can travel straight all the way through the lane that is incorrectly labeled exit only. A simple Road stamp with 526 to signal it is a proper lane and , a sign that says keep moving Chang lanes later would help.
24	Hwy 176 needs widening from Alt 17 and Cane Bay. Dorchester Road (Hwy 642 needs either wider lanes or traffic lights synchronized. More bike lanes and sidewalks.
25	Highway 17 in southern Charleston County could use park and ride facilities with rapid bus service to Downtown, James Island, Mt. P. I would also love ferries or trains doing the same thing to relieve congestion on 17.
26	Highway 162 is in dire need of resurfacing. There are a huge number of large trucks which traverse this small highway every single day. Each day the road seems to crumble more. Additionally, should consider widening 162 to include at least some shoulders
27	Congestion at the I-26/ 526 interchange could be drastically reduced if public transportation was increased and spread out to more areas
28	Close off Tupper at the 5 corner's intersection & feed traffic to alternate roads there. Leave Route 61, scenic hwy. as a scenic hwy. Improve pavement and infrastructure with improved signage and speed checks. Complete New Road that extends from Bees Ferry Circle to Hwy 165, thus rerouting some of the congestion that feeds onto Hwy 61. Finally quit issuing permits to development until we have improved on existing infrastructure. This traffic is horrendous these days!
29	Build 526 now as the #1 priority; Main and Hwy 17 overfly and widen as well as main and river road widen and roundabout;
30	526 east from 26 to Daniel Island. Old traffic engineering plan does not support increased traffic funneling from Goose Creek/Hanahan to 526 and crossing Don Holt Bridge.
31	52 and Cyress Gardens Rd needs so much work—it's such a dangerous intersection.

Table B – Comments from Survey Respondents (to Urban Areas) (Continued)

#	Issues in CHATS Urban Areas
32	17 and main road. Need flyovers so traffic going to, and coming from, Johns Island does not need to stop. Something also needs done with 17 going through Red Top, maybe a service road for the businesses. Right now it is a very dangerous area.

Draft

Appendix A-2

PERFORMANCE MEASURES

Draft

Performance Measures and Targets

Although the FAST Act does not specifically include Metropolitan Planning Organizations (MPOs) or Council of Governments (COGs) under the federal performance planning requirements, SCDOT’s planning process for rural regions in South Carolina is based on a partnership with the COGs. Under the Planning Agreement PL-2017-01, COGs are allowed to establish performance targets consistent with the federally-prescribed requirements for Safety (PM 1), Infrastructure Condition (PM 2), and System Reliability (PM 3).

PM 1 Safety: Federal regulations require state departments of transportation to establish and report annual safety performance targets by August 31st of every year. Per federal rules and SCDOT Planning Procedure Agreement PL-2017-01, MPOs and COGs are also required to formally adopt the State’s safety targets or evaluate and set regionally specific targets, on an annual basis. SCDOT, in coordination with the South Carolina Department of Public Safety, has evaluated and established five targets for safety: number and rate of fatalities, number and rate of serious injuries, and number of non-motorized (NMU) fatalities and serious injuries. For the period 2016-2020, BCDCOG has adopted these performance targets for safety. [Table C](#) presents average and approved safety targets.

Table C – Safety Targets

MEASURE	State Baseline (2013-2017 Average)	State Target (2016-2020 Approved)	BCDCOG Baseline (2013-2017 Average)
Traffic Fatalities	915	988	35
Fatality Rate*	1.75	1.79	2.18
Severe Injuries	3,088	2,986	93
Severe Injuries Rate*	5.94	5.42	5.73
NMU Fatalities & Severe Injuries	381	380	9

* Rate per 100 million vehicle miles traveled (VMT)

For BCDCOG, it entails:

- Addressing areas of concern for fatalities or serious injuries within the non-metropolitan planning area by coordinating closely with SCDOT and incorporating safety considerations on all projects;
- Integrating safety goals, objectives, performance measures, and targets into the planning process; and
- Accounting for the anticipated impact toward achieving the targets within the Transportation Improvement Program (TIP), effectively linking investment priorities to safety target achievement.

Safety Strategies: BCDCOG is committed to improving the safety of the area’s transportation system across all modes. Holistic strategies need to be developed that are aimed at enhancing safety for motorized and non-motorized users beyond engineering solutions. The strategies must also recognize the importance of coordination and cooperation with law enforcement, school systems, local jurisdictions, and the community. BCDCOG will persevere to identify, evaluate, and advance projects through the LRTP and TIP programming activities. It has established Safety Improvements Committee comprised of county and municipal government staff, public safety personnel, public transportation service representatives, school district staff, active transportation advocacy group representatives, and SCDOT staff, in an effort to collectively identify locations with high safety concerns for both motorized and non-motorized users and to propose appropriate safety countermeasures to mitigate them. BCDCOG will continue to actively seek opportunities and engage regional partners to improve safety through education, enforcement, and encouragement programs to support and advance safety targets established by the State.

PM2 Infrastructure Condition: The FAST Act and subsequent federal rule established six performance measures (shown in Table D) related to Pavement and Bridge Condition. For the initial 4-year target-setting period of 2018-2021, BCDCOG has elected to adopt SCDOT’s statewide targets by supporting planned and programmed projects that it has identified for inclusion in this Plan and the TIP.

Table D – Infrastructure Condition Targets

	MEASURE	State 2017 Baseline	State 2-Year Target	State 4-Yr Target	BCDCOG 2017 Baseline
PAVEMENT	% of Interstate Pavements in Good Condition	61.4%	N/A	71.0%	45.6%
	% of Interstate Pavements in Poor Condition	1.7%	N/A	3.0%	2.3%
	% of non-Interstate Pavements in Good Condition	10.3%	14.9%	21.1%	2.7%
	% of non-Interstate Pavements in Poor Condition	2.6%	4.3%	4.6%	13.3%
BRIDGES	% of NHS Bridges in Good Condition	41.6%	42.2%	42.7%	11.9%
	% of NHS Bridges in Poor Condition	4.2%	4.0%	6.0%	4.0%

PM3 System Reliability: The Federal Highway Administration (FHWA) has established three measures to track travel reliability on the road networks: percent of reliable person-miles traveled on the interstate; percent of reliable person-miles traveled on the non-interstate National Highway System (NHS); and an index of truck travel time reliability. These 2-year and 4-year measures, presented in Table E, collectively report reliability of the NHS network as required by MAP-21. For the initial 4-year target setting period 2018-2021,

BCDCOG has elected to adopt SCDOT’s statewide targets by supporting planned and programmed projects that SCDOT has identified for inclusion in this Plan and the TIP.

Table E – System Reliability Targets

MEASURE	State 2017 Baseline	State 2-Year Target	State 4-Yr Target	BCDCOG 2017 Baseline
% of Person-Miles Traveled on the Interstate that are Reliable	94.8%	91.0%	90.0%	100%
% of Person-Miles Traveled on the non-Interstate NHS that are Reliable	89.8%	N/A	81.0%	91.7%
Truck Travel Time Reliability Index	1.34	1.36	1.45	1.14

System Reliability Strategies: BCDCOG in partnership with SCDOT, FHWA, and major employers and stakeholders in the tri-county region is currently facilitating the “Lowcountry Go” rideshare program. The program supports carpools, vanpools, public transportation, walking, and biking that encourage a shift in commuter behavior toward alternative transportation mobility options. The program taps regional employers to promote sustainable commute options such as flextime, staggered shifts, and incentivized travel. With the completion of the Walk+Bike BCD plan, BCD Regional Transit Framework Plan, and BCD Regional Park-and-Ride Study, and the advancement of the Lowcountry Rapid Transit (LCRT) project and continued improvements to the existing local transit systems (i.e. CARTA and TCL), BCDCOG is committed to providing a more balanced mix of transportation alternatives to residents. These activities should help advance the System Reliability targets formulated by the State.

Appendix B-1

RURAL WORKFORCE STUDY

Draft

Image B – Executive Summary

Image B – Executive Summary (Continued)

INTRODUCTION

Initiated in January 2019, the Berkeley-Charleston-Dorchester Council of Governments (BCDCOG) commissioned the Rural Workforce Transportation Study in response to the 2018 Comprehensive Economic Development Strategy (CEDS), which provides strategic direction and action items to guide economic development over the next five years. Integrating transportation strategies that connect the region's labor force to job skills training and employment in the region are an important component to achieve the following CEDS goals:

- Grow and support the region's economic base around existing and new sectors that provide long-term economic resiliency and growth.
- Ensure that all residents of the region have access to a variety of education and training opportunities.

The region's rural areas, where public transportation options are limited or unavailable, is home to approximately 20 percent of the BCDCOG's regional unemployed workforce. While the tri-county region of Berkeley, Charleston, and Dorchester counties has a consistently lower unemployment rate than the state as a whole, on average the rural portions of the region have approximately one percent higher unemployment rate (7.8 percent) than the region as a whole (6.9 percent), and some rural areas have unemployment rates as high as 30 percent.

STUDY PURPOSE AND OBJECTIVES

The purpose of this Rural Workforce Transportation Study is to provide a regional strategy focused on improving access to job skills training and employment for the rural workforce in the Berkeley, Charleston, Dorchester (BCD) region. The study aligns with Economic Development Administration's (EDA) investment priorities to encourage job growth and business expansion in manufacturing by developing a skilled labor force and providing employment access to underserved communities, such as those in rural areas. Employers, major industries and small companies, in the region are increasingly concerned about the shortage of available labor for available jobs.

The key objectives undertaken in this study to meet this purpose included:

1. Developing an understanding of the BCDCOG regional rural workforce and skill sets;
2. Identifying existing and expanding industry training and employment gaps that could be filled by the rural workforce; and,
3. Developing and evaluating potential strategies and recommending ways to better connect the region's rural workforce to job skills training and employment opportunities.

NEEDS ASSESSMENT

Existing conditions helped to establish a baseline understanding of rural area needs. The conditions also helped identify where both job skills gaps and limited transportation access are creating barriers to gaining employment in the rural communities.

NEEDS ASSESSMENT FINDINGS

These findings were used to define what workforce mobility means to the region, outline the key needs and barriers that exist, identify geographic rural areas of focus, and to identify targeted sectors/industries facing workforce shortages. The four focus areas for the needs assessment findings included:

- **Defining Workforce Mobility** – A broad goal of the study and needs assessment included establishing a definition for workforce mobility in the BCD region as defined by project stakeholders.
- **Key Needs and Barriers Today** – Lack of access to vehicles in rural communities; increasing congestion on roads; and the combined challenges of high living costs due to enhanced transportation costs; lack of access to vehicles and higher unemployment and underemployment rates all create barriers to obtaining employment in the rural areas of the region.
- **Education and Training Centers** – There is a combination of public and private training opportunities, which are used to train the workforce to meet these available job opportunities and address unemployment and underemployment gaps in the region.
- **Defining Key Industries and Job Needs** – Currently, over 35 percent of employment opportunities are concentrated in the Health Services and Private Education, Leisure and Hospitality, Professional and Business Services, Government and Trade, Transportation and Utilities sectors. Most employment growth is forecasted to be in the Production and Mechanical, Hospitality, Medical, Business Operations Support, Software and IT.

Image B – Executive Summary (Continued)

RURAL SERVICE AREA AND EMPLOYMENT/TRAINING PROFILES

Based on the needs assessment and additional input received as part of Stakeholder Meetings, key rural areas were mapped for employment, education, and training. Rural service area profiles were then developed to more closely understand each rural population area and potential training and employment needs and opportunities.

NODES AND CORRIDORS DEVELOPMENT

Data collected through the needs assessment, and through input obtained from stakeholders during Stakeholder Meeting #3 on training, education, and job centers was used to develop a heat map identifying major nodes and corridors within the rural areas in the region and major jobs and training to be served. The heat map of nodes and corridors in the region are shown below. The heat map illustrates tri-county employer locations and densities, major colleges and training centers, major adult education centers, and private training locations.

DEFINING RURAL SERVICE AREA PROFILES

Based on available data and the identification of places and municipalities with rural areas as part of the initial needs assessment, four main rural clusters were identified within each tri-county area that could comprise an overall rural service area for workforce transportation solutions: Dorchester County northwest of Ridgeville, Berkeley County on the eastern shores of Lake Moultrie, western Charleston County centered near St. Paul's Parish, and eastern Charleston County along US 29 north of Mount Pleasant.

Image B – Executive Summary (Continued)

TRANSPORTATION STRATEGIES DEVELOPMENT AND EVALUATION

The needs assessment along with one-on-one interviews, rural service employment and educational profiles, and additional stakeholder outreach helped to generally define the region's rural training and workforce challenges and opportunities. Following these analyses, potential measures of effectiveness for meeting the needs of the study and evaluating transportation strategies were developed. Several potential transportation strategies and other supporting strategies were also identified.

IDENTIFYING POTENTIAL STRATEGIES

Four broad initial transportation strategies were identified and reviewed with stakeholders and are described below in no particular order of importance.

#	Strategy	Description
1	Expand TriCounty Link Service Coverage and/or Frequency	Enhancing the frequency, modifying existing TriCounty Link desired fixed routes, or creating new TriCounty Link desired or fixed routes to service more coverage areas.
2	Micro-Transit/Ride Sharing and Sharing Options	Partnering with ride sharing or ride-sharing companies, also known as transportation network companies (TNCs), to offer service in the rural areas or rides specific to job training and employment services.
3	Car Sharing	Car sharing is a type of car rental where people can rent cars for short periods of time, often just hours. Car sharing can be organized through provisions of cars by companies or by public agencies, other organizations, or even individuals.
4	New Training and Employment Specific Carpools or Vanpools	New carpools or vanpools could provide rural communities with direct access specifically to jobs or training in the region and users could either meet up at specified locations for group pick-up service or provide direct services from rural user homes to job or training locations.

DEFINING MEASURES OF EFFECTIVENESS

Measures of effectiveness (MOEs) are tools used to frame the desired results of a proposed solution and help evaluate the effectiveness of strategies comparatively. Based on stakeholder input and analyses undertaken, several measures of effectiveness were identified based on overall goals for service between rural communities and employment and training.

Measure of Effectiveness	Definition	Evaluation Factor	High	Medium	Low
Service Effectiveness/Accessibility and Connectivity	Services need to be flexible to accommodate different training and job locations throughout the region and to provide different hours of service to accommodate different training or shift hours. Services provided to link rural communities to jobs and training needs to be available and accessible to a broad array of users.	Directness	Direct point to point service	Provides relatively direct services using a group event up or drop-off location	Pick up and drop off locations are only at standard stops or locations
		Fixed Time & Reliability	Comparable travel time to regular automobile travel	Similar to regular automobile travel but variable reliability	Significantly slower than regular automobile travel
		Service Flexibility (Time of Day Service)	Provides services at any time	Provides flexible service hours	Provides service at more limited times
Ease of User Finding Communications	Services used to provide multiple ways of requesting services, from website or smart phones to calling by telephone or requesting services by computer.		Services are highly visible to potential users, can be made with little instruction, and through a variety of means.	Services are generally visible to potential users, may require some searching, and through a variety of means.	Services are not visible and service requests are made through less than three potential methods or require access to cell phones or smart phones and broadband access only
Community Partnership and Collaboration	Strategies that can help leverage partnerships to share costs for services, promote the use of services, and that create a sense of joint community ownership of services are therefore desired.	Partnership	Cost sharing is available and directly benefits employers	Cost sharing is available but has not led to more cost sharing opportunities with private industry	Cost sharing is limited and more costly to support service.
		Community Collaboration	Specifically targets user cohorts	Does not target cohorts, but could foster a community of users	Does not promote interactions of users with similar training and employment travel needs

Image B – Executive Summary (Continued)

<p>Revised: 01/21/2024 Page 18 of 100</p>	<p>Revised: 01/21/2024 Page 19 of 100</p>
<h3>RECOMMENDATIONS</h3>	
<p>Consensus was reached with stakeholders that moving forward with a carpool and vanpool-oriented strategy would best meet rural workforce training and job transportation needs. Stakeholders suggested that this option provided not only more flexible and reliable services but had the potential to incorporate employers to support these transportation strategies and could help to establish the types of “cohort” models desired to bring a sense of community to rural workers seeking transportation options to meet training, education, and job placement needs.</p>	<p>be changeable and more flexible in that users can pick a van or car size that is appropriate to the number of users of the vanpool. This model still requires regular day to day BCDCOG support to help coordinate the service, work with the vendor, and to support the successful implementation of the program. Establishing websites, call centers, and other mobile applications to match riders with available services would still need to be coordinated through the agency.</p>
<p>There was a desire to focus on geographic and industry-specific pilot programs to better facilitate the enhanced coordination that would be needed between BCDCOG, employers, education and training coordinators, and economic and employment partners. When asked about which industries to focus on, there was consensus that focusing on manufacturing, healthcare, and/or technology IT industries would best align with regional forecasts for growth and needs for further skills training opportunities.</p>	<p>Capital costs and operations and maintenance costs would have different implications for each of these options. Capital costs per vehicle for purchased vehicles can range from \$35,000 to \$65,000 based on national averages and procurement of vehicles by an agency generally takes between 12 and 18 months. Purchasing vehicles is costly and contains several risks for implementation of a new service like this. Each new vehicle procured represents not only an investment of capital outlay, it includes greater operational and maintenance costs associated with maintaining the asset. Operations and maintenance costs to an agency are ongoing and funding assistance at a federal level for operations and maintenance are more limited than assistance for one-time capital purchases.</p>
<p>Two options for vanpools or carpools were further considered and evaluated with stakeholder input through this study: a BCDCOG-operated vanpool service or a privately contracted vanpool or carpool service managed through BCDCOG. An agency operated and maintained vanpool would function like other public transportation services in the region, and BCDCOG would be responsible for acquisition of new van fleets to provide the service and maintenance of vehicles. The agency would subsidize fuel, insurance, and maintenance. Drivers could be provided by BCDCOG at additional costs for drivers or drivers could consist of volunteers to lead vanpools, if they have a valid drivers’ license and meet any other requirements established by the agency to provide safe and effective services.</p>	<p>Other supportive strategies included:</p> <ul style="list-style-type: none">• Technology Integration and Expansion• Leveraging Partnerships through Subsidies and Incentives; and• Enhancing Communication, Coordination, and Outreach.
<p>A second option would use a contracted provider to provide vehicles on a monthly fee basis. Drivers would be users of the service, with valid drivers’ licenses and who meet any other requirements established by BCDCOG and the operator. Additional costs to provide fuel and maintenance reimbursement and for insurance coverage would be needed to subsidize full costs of the service. While still heavily subsidized by BCDCOG, the agency benefits from not needing to purchase additional fleet and more expensive costs for staff to maintain fleets. Based on national experience, vans purchased by a transit agency range from \$35,000 to \$60,000 depending on vehicle size, make and model.</p>	
<p>Stakeholders did not indicate a preference on the proposed operational structure of a carpool or vanpool service. Each of these types of services have been employed successfully in a variety of places across the nation. Some of the most successful vanpools in the nation, like those that operate in suburban areas outside of Seattle, Washington and Chicago, Illinois have tended to be agency-operated services. These service models allow the agency to work more closely with elected officials, other agencies and the community to tailor and customize solutions and monitor service performance more closely than privately operated models allow. Federal subsidies and grants can help to support services like these relatively easily. Disadvantages are that the agency assumes all costs and risks of the service and staff resources must be dedicated to coordinating services on a day to day basis.</p>	
<p>Privately operated options are also prevalent across the nation. Services such as these have been initiated in several places across the nation, including in rural areas of North Carolina (GoTriangle), Pennsylvania, and New Jersey. These outsourced services mean that the agency does not have to maintain and directly coordinate services, leading to a more administrative role in coordinating the vanpool program. The agency still typically addresses costs for liability and insurance and coordinates all contracts. Vanpool fleets can also</p>	
<p>RURAL WORKFORCE TRANSPORTATION STUDY – Executive Summary March 2024</p>	<p>RURAL WORKFORCE TRANSPORTATION STUDY – Executive Summary March 2024</p>

IMPLEMENTATION, COSTS, AND FUNDING CONSIDERATIONS

Based on the evaluation of potential strategies, stakeholder input, and additional considerations on how to operate a new vanpool or carpool program, the preferred strategy to move forward is a new vanpool or carpool service, either by BCDCOG purchasing vehicles or through use of a private company to provide vehicles. High level planning costs for implementation and potential funding opportunities are also provided.

INCREMENTAL IMPLEMENTATION OF THE REGIONAL STRATEGY

A total of 14 potential service areas from each of the four rural areas to these major employment or training locations have been identified as part of this study: four in Berkeley County, three in western Charleston County, three in eastern Charleston County, and four in Dorchester County.

A variety of vanpool or carpools are possible and would focus on linking potential users to manufacturing, health care, and/or training and educational centers. Employment hubs identified included manufacturing concentrated employment along Palmetto Commerce Parkway, concentrations of healthcare providers and employment along US 17 and near North Charleston, and different training and educational centers located near each rural area as well as near these manufacturing and healthcare hubs. These are not all-inclusive of potential carpool or vanpool services that could be offered throughout the region but represent a starting place for more detailed discussions with specific employers and training or education centers to implement and identify demands for service.

Establishing a demonstration pilot vanpool is recommended first to fully develop the vanpool program and needs, and these services could be expanded to serve all regions.

- Demonstration of a pilot vanpool or carpool program could be established in each of the four rural service areas defined in this study and focus on further coordination and partnerships with a specific industry cluster, such as manufacturing along Palmetto Commerce Parkway or Healthcare Providers along US 17 and in North Charleston.
- Alternatively, a pilot vanpool or carpool could be established in each of the rural service areas and focus on coordination with a specific employer. Volvo was identified as a nearby manufacturing employment location, for instance, in Berkeley and Dorchester counties, and is an employer that is expected to increase its needs for workers in the near-term as they expand the Volvo Berkeley County plant location. Implementation first in Berkeley and Dorchester Counties, where distances are shortest between rural areas and the employment location could be prioritized.
- Demonstration of a pilot program vanpool or carpool could focus on one of the rural service areas defined (Berkeley, western Charleston, eastern Charleston, or Dorchester County) and implementation could include work with one or more of the concentrated manufacturing and healthcare hubs along Palmetto Commerce Parkway or along US 17 and in North Charleston, respectively.

PLANNING LEVEL COSTS

Several costs can be anticipated depending on the level of investment and implementation of a demonstration pilot program and some of these high-level costs are identified below. While this may not be all-inclusive of cost items for specific demonstration pilot programs, these are the most important cost considerations in developing a successful program.

SUMMARY OF ANTICIPATED COSTS

This cost estimate provides a high-level assumption for costs of implementing services and will need to be refined as part of the implementation program. Costs have been assumed at varying levels of investment, including leasing and implementation of four, eight, or 12 vehicles. A minimum of four vehicles, which could be combination of six- to 12-passenger vehicles, is assumed based on the four major rural service areas defined in this study.

CAPITAL COSTS

For the purposes of establishing comparative costs, capital costs are assumed to include costs for purchasing or leasing vehicles and installing ride matching software costs. Some maintenance costs are embedded into the costs for leasing vehicles since leased vehicles would be replaced with other available rental vehicles if found to have deficiencies, such as when brakes are worn or age. Annual operating costs for ride matching software subscription services are included in annual operating cost assumptions and would be the same for either the purchase or lease vanpool options. These costs do not estimate how much of the actual costs for vehicles could be subsidized by employer benefit programs. While local governments and agencies may have to initially pay for these costs, the longer-term goal of these services should be to be self-sustaining with private employers helping to pay some portion of these costs incurred for providing the service and enhancing contributions over time as demands for service can be demonstrated to specific employers.

Capital costs for purchasing vans are assumed at \$30,000 per vehicle based on national and local experience and can vary by make, model, and year purchased. Vehicle life is assumed as eight years for purchased vans or minivans based on PTA useful life benchmarks for this vehicle type.

The typical cost of leasing a van, not including fuel or maintenance costs, can range between \$1,200 and \$1,500 per month per vehicle to accommodate fleets holding between 7 and 12 passengers and is shared between users of the system and through the level of agency-designated subsidy to riders. An average of the anticipated range of costs associated with leasing (\$1,300 per vehicle per month) are assumed for high level cost estimating purposes. For ride matching software, an initial cost of \$30,000 is assumed based on BCDCOG experience with recent vendors in the region.

Image B – Executive Summary (Continued)

Annual Capital Costs Assumptions (For 4, 8, or 12 Vehicle Implementation)

		Four Vanpools	Eight Vanpools	Twelve Vanpools
Vehicle Fleet Costs ^a	Vehicle Purchase Cost	\$304,000.00	\$608,000.00	\$912,000.00
	Leasing Vehicle Cost	\$62,400.00	\$124,800.00	\$187,200.00
Ride Matching Software		\$30,000.00	\$30,000.00	\$30,000.00
GRAND TOTAL:	Purchase Option	\$334,000.00	\$638,800.00	\$942,000.00
	Lease Option	\$92,400.00	\$154,800.00	\$217,200.00

^aVehicle purchasing and leasing options differ in how capital costs are incurred. While purchasing vehicles requires up-front capital investment (spread over, on life expectancy of 8 years), as such, while vehicle leasing costs may appear less expensive, when considered across an eight-year life cycle, they are approximately 2.5 times more expensive than purchase costs. At the same time, some larger vehicle requirements or maintenance costs are included in leasing, which, as if a vehicle is no longer in good condition, it is replaced for users without additional capital or maintenance cost to the agency.

If desired, park and rides would increase capital costs. Interm and low-cost solutions, such as working with and using church, or other community organization sites, are possible and further discussed in the report.

OPERATIONAL COSTS:

Operational costs differ between purchase and leasing options. This estimate provides examples of costs associated with initial implementation of either 4, 8, or 12 vanpools for comparative purposes and to provide further insight on how the number of vans may impact operational costs over time. As can be seen, as more vehicles are operated, certain costs, such as operational and maintenance costs, emergency ride home payments, and insurance, increase. This underscores the need for developing cost sharing opportunities with employers and enhancing contributions over time to create self-sustaining services.

Purchase Option: Annual Operating Cost Assumptions (For 4, 8, or 12 Vehicle Implementation)

	Four Vanpools	Eight Vanpools	Twelve Vanpools
Operations Costs (Agency)	\$55,522.00	\$111,045.00	\$166,567.00
Fuel, Maintenance Costs	\$15,040.00	\$30,080.00	\$45,120.00
Rideshare Software Subscription Fees	\$30,000.00	\$30,000.00	\$30,000.00
Staff Support	\$65,000.00	\$65,000.00	\$65,000.00
Office Equipment, Printing, Supplies	\$3,000.00	\$3,000.00	\$3,000.00
Emergency Ride Home Claims/Payments	\$2,400.00	\$4,800.00	\$7,200.00
Marketing Budget	\$50,000.00	\$50,000.00	\$50,000.00
Additional Insurance Costs	\$20,800.00	\$41,600.00	\$62,400.00
Planning Level Contingency (5% of total costs)	\$13,066.10	\$16,776.35	\$21,866.35
GRAND TOTAL:	\$153,858.10	\$352,301.25	\$458,751.35

Lease Option: Annual Operating Cost Assumptions (For 4, 8, or 12 Vehicle Implementation)

	Four Vanpools	Eight Vanpools	Twelve Vanpools
Fuel, Maintenance Costs	\$15,040.00	\$30,080.00	\$45,120.00
Rideshare Software Subscription Fees	\$30,000.00	\$30,000.00	\$30,000.00
Staff Support	\$65,000.00	\$65,000.00	\$65,000.00
Office Equipment, Printing, Supplies	\$3,000.00	\$3,000.00	\$3,000.00
Emergency Ride Home Claims/Payments	\$2,400.00	\$4,800.00	\$7,200.00
Marketing Budget	\$50,000.00	\$50,000.00	\$50,000.00
Additional Insurance Costs	\$20,800.00	\$41,600.00	\$62,400.00
Planning Level Contingency (3% of total costs)	\$6,272.00	\$9,144.00	\$18,016.00
GRAND TOTAL:	\$184,512.00	\$233,624.00	\$272,736.00

While there are high-level cost comparisons possible between purchase and leasing options when capital and operational costs are combined and calculated, funding availability and resources for both capital and operating expenses can differ between purchasing and leasing options and funding resources available. Additionally, the level of subsidy provided to users to off-set costs for either option varies over time and may influence cost comparison between options. The goal of successful carpool or vanpool services in the region should be that they are self-sustaining and pay for themselves over time. While this is a long-term goal, monitoring ridership and subsidies and incentives against the costs to provide and manage service operations is important to ongoing monitoring of a cost-effective system.

FUNDING CONSIDERATIONS

In services such as these, local governments and transportation agencies can help to subsidize costs, including liability and insurance coverage and to supplement costs to users. At initial stages of development and implementation of a pilot demonstration project and as costs for the service are more accurately forecasted, coordination with specific employers and training/education centers should be undertaken to identify the level of subsidy that will be available. There are also potential state and federal funding and grant opportunities as well as other unique funding sources that could be used to help support start-up and implementation of a vanpool demonstration pilot program or programs. There are also additional non-profit sources of grant funding, which could also be leveraged to fund potential pilot projects.

Image B – Executive Summary (Continued)

POTENTIAL FUNDING SOURCES AND USES

Below is a sample of potential funding sources along with their potential eligible uses.

Type	Source	Use	Amount
Employee/Employer	Pre-tax commuter benefit	Pre-tax deduction for employee/FICA Tax reduction for employer	\$216/week/employee
County Government (Berkeley, Chatterton, Dorchester Counties)	Local Option Sales Tax	Tax revenue to fund potential program costs	Not to exceed 2 percent
Federal Transit Administration (FTA)	Integrated Mobility Innovation	Wide-ranging software, including software enhancements (e.g. mobility)	\$25 million available in 2023
US Department of Commerce, Economic Development Administration (EDA)	Access and Mobility Partnership	Mobility services for disadvantaged populations	
US Department of Commerce, Economic Development Administration (EDA)	Disaster Recovery Funds	Infrastructure to provide job and skills training	\$500 Million available to eligible grantees
US Department of Commerce, Economic Development Administration (EDA)	Opportunity Zones	Tax incentives to attract private investment into pilot projects	
US Department of Transportation	BUILDITIGER Grant	Facilities, capital costs, vehicles, job and ride log	\$25 million maximum award
SC Department of Commerce, Community Development Block Grant Program (CDBG)	Community Infrastructure Grant	Central Passenger Structures	\$50,000-\$25,000
SC Department of Commerce, Community Development Block Grant Program (CDBG)	Community Enrichment Grant	Workforce Development Services	\$50,000-\$25,000
SC Department of Commerce, Community Development Block Grant Program (CDBG)	Special Projects Program	Community Development Projects	\$50,000-\$25,000
Non-Profit Grants	Bank of America Foundation	Low economic mobility	
	ABS Foundation – Widow Workforce Grants	Training center enhancements	Up to \$1,500
	Walnut Foundation	Quality of life programs for work dignity	
	Coastal Community Foundation (CCF) or United Way	Provide access to economic opportunity	
	Volvo Car USA Community Investment Grant	Projects addressing safety, quality, education, and environment	Up to \$25,000

CONCLUSIONS AND NEXT STEPS

Implementing a new carpool/vanpool program from the ground-up will require significant effort and buy-in from industry and other agency partners to be successful. A summary of key next steps that will help establish the foundation for the program and help to build the program in targeted ways are provided below. Continual monitoring of the program to help build an ultimately self-sustaining program will be necessary throughout the process.

KEY STEPS AND MILESTONES

It is anticipated that additional planning required to fully develop a specific demonstration program will take approximately 12 to 18 months. The timeline will depend on the demonstration program selected and can vary depending on the level of implementation desired. Understanding key steps and milestones can help to further define planning needs for implementation. These steps, key milestones, and anticipated duration or schedule are shown graphically on the figure below.

Generalized Schedule and Key Milestones for Demonstration Program Implementation

Appendix B-2

BIKE-PED RECOMMENDATIONS

Draft

Overview

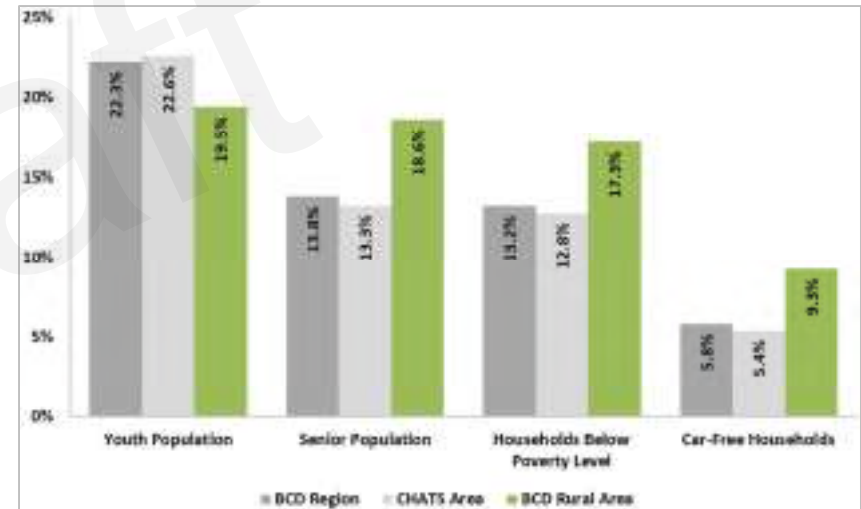

The demand for walking and bicycling is much more context-sensitive than that of motorized modes of travel and is influenced by a number of factors such as existing land use and built environment; characteristics and state of facilities; natural environment including weather, climate, and topography; socio-demographic factors; and attitudes and perceptions.

The Berkeley-Charleston-Dorchester region is locally and nationally known as an active, healthy and prosperous place to live. The region's abundant natural resources and destinations include miles of coastline, tidal rivers, bays, inlets, islands, and estuaries as well as large areas of protected lands such as the Francis Marion National Forest, Santee Coastal Reserve and Cape Romain National Wildlife Reserve. These destinations offer residents with a diverse mix of recreational activities and opportunities to engage in a healthy lifestyle. The region's low-lying topography also adds to the comfort and accessibility for individuals travelling on foot or by bicycle. In addition to the recreational demands for walking and bicycling, there also exists a large utilitarian or non-discretionary need for alternative modes of travel for work and other non-recreational trip purposes within the region.

Approximately 20% of the rural area population is comprised of children 18 years and younger, while 19% of the population is seniors 65 years and older. In general, the demand for both walking and bicycling decline with age; however, behavioral research also shows that walking and bicycling for utilitarian purposes are highest for younger travelers since they are unable to drive. While older adults typically have a higher demand for walking and bicycling for recreation and physical activity purposes, this demand may also be influenced by mobility constraints due to income and/or the impact of age related impairment on an individual's ability to drive.

When compared to the tri-county region and CHATS urban area, the rural area has a higher than average proportion of households living below poverty and households that do not own an automobile. Based on Year 2017 US Census data illustrated in Figure B, the proportion of zero-vehicle households in rural areas is almost twice that of the entire region. This number is highest in rural Berkeley County, where roughly 1,170 households do not own a vehicle. For these households, alternative modes of travel including bicycling and walking may be the only option they have for their daily trip activity regardless of the facilities available or the conditions they experience.

Figure B – Population Profile

Development patterns in rural areas also make it more challenging to utilize alternative travel modes. Development is typically sparser, covering larger footprints with longer distances between major origins and destinations. Longer travel distances and time are not preferred for non-discretionary bicycle and walk trips. While safety tends to be the greatest concern for recreational users, a network that also provides good coverage and connectivity to activities is important to the utilitarian user.

Popular Facilities

East Coast Greenway: The East Coast Greenway is a national pedestrian and bicycle route extending roughly 3,000 miles from Calais, Maine to Key West, Florida. The Greenway is intended to provide safe and sustainable travel options to users of all abilities for commute, exercise, and recreation purposes. It is also planned to increase mobility and access between neighborhoods, communities, and activity centers along the corridor. While the alignment of the Greenway includes on-road and dedicated facilities such as trails, bikeways, rail trails, and pathways, partners of the Greenway continue to work toward the corridor's long-term vision to have at least 80% of the system along traffic-separated trails and 20% on low-traffic rural roads and city streets.

In Year 2005, BCDCOG completed a trail master plan for the approximate 95-mile section of the East Coast Greenway that passes through the region, primarily along US-17 in Charleston County, connecting many of the rural communities such as Hollywood, Ravenel, Awendaw and McClellanville to the region's urban areas and major employment centers. In planning for the Greenway, focus was placed on connecting the trail system to key destinations and venues, providing linkages between communities, existing parks and greenspaces, nature preserves, community facilities including schools, cultural resources, and historic facilities, and commercial areas.

Of the local rural municipalities located along the Greenway, the Town of Awendaw has been actively planning and delivering the 12-mile trail segment within its jurisdiction. The Town, as part of its Municipal Park Plan, recently completed and opened the first phase of the Awendaw East Coast Greenway, a 2.3-mile off-road bicycle and pedestrian path. The Town is committed to further developing the trail that offers safe and easy access to the local cultural and environmental amenities, promotes healthier lifestyles, and supports local economy.

Palmetto Trail: Conceived in Year 1994, the South Carolina Palmetto Trail is the state's largest bicycle and pedestrian project. The roughly 500-mile cross-state hiking and bicycling trail connects the State's coastal area (Awendaw on the Intercostal Waterway) to the mountains (Wallhalla in the Blue Ridge Mountains) and many of the towns in between. The trail is envisioned to form a major spine that supports a network of connected trails and bikeways through South Carolina, linking state and county parks, national forests, nature preserves, wildlife management areas, Revolutionary War battlefields, and other historic, cultural and environmental resources. Roughly 85 miles of the Palmetto Trail passes through the tri-county region, mainly in rural Charleston County and Berkeley County. Starting at the Intracoastal Waterway in the Town of Awendaw, it works its way westward along the Awendaw Creek, through the Lowcountry marshes and Francis Marion National Forest to the banks of Lake Moultrie and beyond, providing access and connection to communities of Huger, Pineville, Pinopolis, Cross, Town of Bonneau and Town of St. Stephen.

SCPRT Touring Bike Routes: Two of the State's Parks, Recreation, and Tourism (PRT) bicycle touring routes traverse through Berkeley County and Dorchester County. The Walter Ezell Route along SC-45 in Berkeley County connects McClellanville, Jamestown, St. Stephen, and Pineville. It also connects Ridgeville, Moncks Corner, and Jamestown to the adjacent counties and beyond. The trail provides public access to outdoor recreation, supports alternative travel options, and fosters tourism, business, and economic development. These touring routes that travel along SCDOT-maintained roadways are identified to showcase the State's aesthetic qualities.

Recommendations

In Year 2017, BCDCOG developed a long-range regional active transportation master plan - *Walk+Bike BCD* - in partnership with its member governments, local advocacy groups and non-profits, and citizens. The master plan establishes a vision and implementation plan for investing in walking and biking projects that support the region's goals of expanding active transportation options as well as improving the health, safety, economic development, and quality of life of its residents. It also seeks to improve the region's network of infrastructure for active transportation connecting communities of all sizes across the tri-county region, so that walking and bicycling are a common part of everyday life for residents and visitors alike.

Walk+Bike BCD is framed around the "6 E's" of pedestrian and bicycling planning: Engineering, Education, Encouragement, Enforcement, Evaluation, and Equity. Opportunities and recommendations identified in the plan include policies, programs, and projects that address these concepts collectively to develop and sustain walk- and bike-friendly places. Building on the extensive cooperative work accomplished in the master plan, the 2040 RL RTP bike-ped projects incorporates major elements of recommendations identified in [Table F](#). Various pedestrian and bicycle facility types can be implemented based on national best practices. However, some facilities are more practical in an urban context with higher pedestrian and bicycle traffic, facilities such as shared lanes (signed and/or marked), signed routes, multi-use paths and paved shoulders shown below appear more suitable in rural areas.
